

ARCHITETTURA SONORA

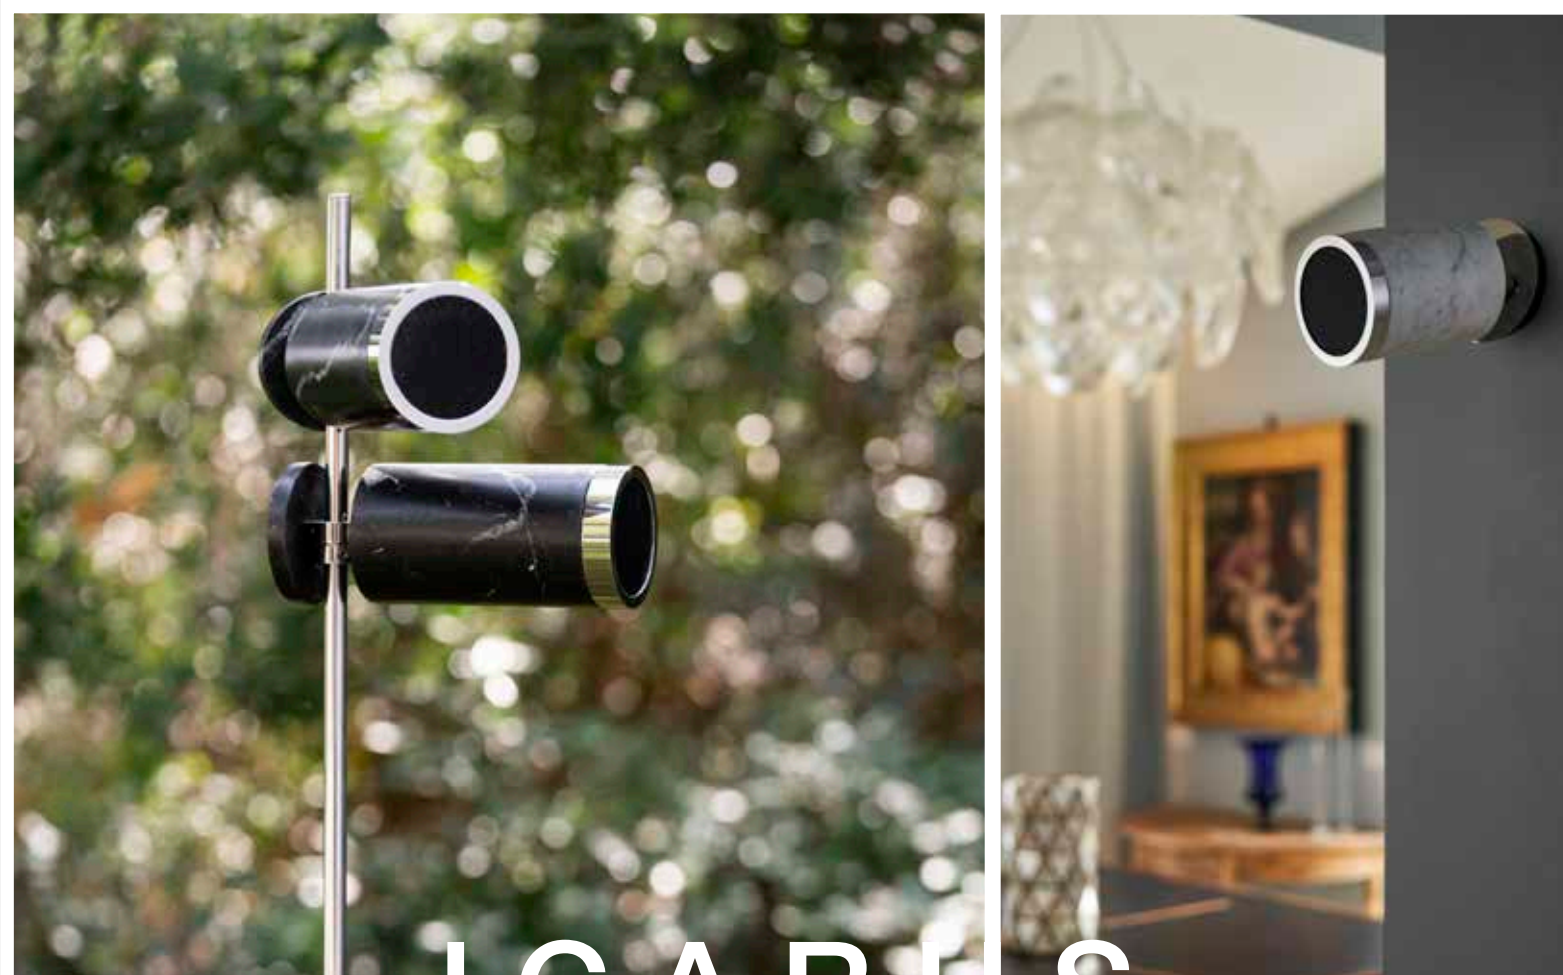

THE SOUND OVERVIEW #1

ARCHITECTS OF SOUND

At Architettura Sonora we shape technology to merge sound and design in their most beautiful synergy.

Born in 2009 as a division of one of the top professional loudspeakers manufacturers, B&C Speakers, Architettura Sonora drew together a creative team of acousticians, engineers, architects and landscape designers sharing the same enthusiastic vision to rethink the way acoustic speakers had been conceived and created until then.

Sound is a fundamental feature of our spatial experience. We investigated how sound interacts with its surroundings and the different materials, designing speakers that do not limit their environment to a background to a performance, but wield it as a key component to enhance acoustic experience.

I CARUS

ICARUS is our newest range of AS speakers designed by architect Giulia Archimede, conceived to offer highly customised solutions for the most diverse and challenging audio demands.

The orchestration of different Icarus speakers meets any requirement. Immersive audio in adjacent rooms. Directional sound in specific areas, outdoor or indoor. Immersive audio that doesn't bother the neighborhood. Icarus seamlessly integrates within any space maximising its potential.

STAND-ALONE

The AS Cylinder family has been designed as part of the VDLine in collaboration with landscape architect Vladimir Djurovic, winning the “A+ Architizer” Award in the “Product&Acoustic” category, an international definition of the quest for sound and design excellence.

The Cylinder family is declined in three different sizes: Tall, Medium and Cylinder Table in order to better adapt to different contexts, indoors and outdoors.

The SPHERE is AS signature speaker. Representing wholeness and harmony, it subtly envisions the propagation of sound in circular waves.

Omnidirectional loudspeaker characterized by a full and warm tonal balance, the Sphere adapts to any type of environment. It is available in a wide range of materials and finishing, full-range or subwoofer, with two different options for the base design,

The Lighting option is available for all variants of the Sphere line.

The Spherina Family represents the creative innovation rising from Architettura Sonora's roots, the Sphere, with its evoking concept of harmony and perfection. Our architects reimagined the AS iconic shape into a new context, using new materials and refined details.

With the new Lighting option, Spherina turns into a ceiling or floor lamp, thus becoming a multifunctional and multisensory element. Sound and Light join together to create a charming atmosphere on multiple levels of perception.

Simple, sleek and compact, the Cube family combines high-style and quality sound in various models of variable dimensions and different materials, meeting the most varied needs in both acoustic and aesthetic terms.

Unparalleled in performance, the Cubes represent the top of the AS range. The cubic shape brings to mind solidity and reliability, making it a great element to contrast spaces architecturally dynamic.

Innovative material shaped into organic forms, AS aerial solutions are satellite-suspended loudspeakers.

Distinguished by a warm tonal balance with a directional sound emission, our aerial speakers produce “sound showers”, delimiting and isolating sound even in adjacent areas.
